13 December 1954

MEMO FOR THE RECORD OF THE CLARK COMMITTEE

0900-1030 Assistant Director, SI
1030-1200 Executive Office (OSI)

1. The opening discussion of the day was conducted in rather general terms, with Colonel Miller's interests centering on personnel, security, operating efficiency, missions, and goals.

2. Colonel Miller asked (a) whether OSI had ever considered establishing field offices for the purpose of collecting its own material, (b) whether those currently engaged in field collection were capable of recognizing those items of interest to the IAC, and (c) whether current security regulations were hampering OSI in its mission.

3. Colonel Miller was interested in the use made by OSI of its various consultants. He asked numerous questions pertinent to OSI's overseas representation, their competency and qualifications.

4. Colonel Miller was concerned over personnel turnover in OSI, based on scientists rotating between the government and keeping abreast with their professional careers on the outside.

5. Mr. McGruder asked whether cordial relationships were maintained with scientists outside the government, or whether US scientists, by and large, were reluctant to cooperate with the government as such.

6. Colonel Miller felt that greater publicity should be afforded to OSI's activities, thereby soliciting voluntary contributions from those outside the government who might otherwise be unaware of OSI's endeavors.

7. In the Office of the Executive Officer, McGruder asked numerous questions on the career service program, and its effectiveness among OSI personnel.

8. Colonel Miller has suddenly become interested in Military personnel assigned to duty with the Agency. As he put it, "I thought you people felt that civilians would do a better job in intelligence than the military!" He wants to know how many military personnel are assigned, how the number was determined, why assigned, for how long? McGruder and Miller seem opposed to the idea of military personnel being assigned the Agency, and that they could do far better serving the Agency from their parent organization in the Department of Defense. Miller feels he may be called upon to justify military assigned to the Agency, especially since the Department of Defense is suffering from a strict ceiling(TO).

010152

9. Colonel Miller spent considerable time on the subject of recording, filing, and routing of material coming in to OSI (mail room). He realizes these procedures are the result of specific security regulations, but by the same token, he feels they are burdensome, overly-detailed, and in many instances, waste and useless effort.

10. **1300-1430 OSI (Nuclear Energy)**

Colonel Miller spent a good deal of time attempting to determine whether this phase of the Agency's activities duplicated (in whole or in part) the interests of the AEC. He wondered whether this office would not function just as well if physically removed from the Agency and integrated into the AEC. He tried to determine what responsibilities were rightly those of AEC, and when CIA picked up where AEC left off.

11. One thing that Colonel Miller has asked, consistently (which has not been mentioned to date) of every office he visits, "What does the covert side contribute to your efforts?" His assumption is that DD(P)'s contribution to DD(I)'s efforts are of no great consequence.

12. **1430-1530 Scientific Resources Division, OSI**

The usual questions (i.e., "What do you do, who for, how, qualifications to do the job, TO, duplication possibilities, etc..."?)
